### **Chrome**

If you are Linux user, then (according to

<u>http://www.borfast.com/blog/how-enable-webgl-google-chrome-linux-blacklisted-graphics-card</u>) you can try running it from commandline with *--enable-webgl* and *--ignore-gpu-blacklist* switches:

```
$ google-chrome --enable-webgl --ignore-gpu-blacklist
```

It should be working for other operating systems too. Moreover, you can set appropriate flags with <u>chrome://flags/</u> URL in your Chrome browser.

## **Other browsers**

You can help us to support your browser. If you figure out how to solve your issue, please let us know about solution so we can append it to this document. Good idea is to begin with inspecting solutions available for Chrome - they might work (or give you a clue what the nature of the issue might be).
