Mozilla Firefox	21.0		21.0
Opera	Not supported	Not supported	Not tested
Chromium	25.0.1364.160	Not tested	Not tested
Konqueror	Not supported	Not tested	Not tested
Internet Explorer	Not tested	Not supported	Not tested
Links	Not supported	Not tested	Not tested

Chrome

If you are Linux user, then (according to http://www.borfast.com/blog/how-enable-webgl-google-chrome-linux-blacklisted-graphics-card) you can try running it from commandline with *--enable-webgl* and *--ignore-gpu-blacklist* switches:

```
$ google-chrome --enable-webgl --ignore-gpu-blacklist
```

It should be working for other operating systems too. Moreover, you can set appropriate flags with chrome://flags/ URL in your Chrome browser.

Other browsers

You can help us to support your browser. If you figure out how to solve your issue, please let us know about solution so we can append it to this document. Good idea is to begin with inspecting solutions available for Chrome - they might work (or give you a clue what the nature of the issue might be).
