

3d Brain Atlas Reconstructor

Software dedicated to automatic generation of models of 3D brain structures.

*Supported by an infrastructural grant
from the Polish Ministry of Regional Development
POIG.02.03.00-00-003/09*

2. Publications
3. 3d Brain Atlas Reconstructor workflow
4. Application screenshots

Project goals

1. Creating software dedicated to automated reconstruction of 3D brain models. Key features:
 - ◆ Generating model of any combination of structures (ie. basing on structures hierarchy),
 - ◆ Arbitrary resolution of generated model (depends on source atlas quality only),
 - ◆ Exporting models as polygonal mesh or volumetric datasets.
 - ◆ Modularity: One 3D model generation module, many wrappers for different input atlases.
2. Support the software with:
 - ◆ Own data (ultimate goal),
 - ◆ Existing 2D atlases (as training sets).
3. Creating special dataset format
 - ◆ Based on SVG format,
 - ◆ Adapted for handling representation of brain structures,
 - ◆ Supporting brain regions hierarchy,
 - ◆ Maximizing possibilities of atlas systems interoperability.
4. Ultimately, 3D Brain Atlas Reconstructor would be available as an open source project and on-line service.

Publications

- Common Atlas Format and 3D Brain Atlas Reconstructor, the infrastructure for constructing 3D brain atlases by Piotr Majka, Ewa Kublik, Grzegorz Furga, Daniel K. Wójcik (2011) submitted
- Automated reconstruction of three-dimensional brain structures based on 2D histological atlases by Piotr Majka, Grzegorz Furga, Ewa Kublik and Daniel Wójcik. Neuroinformatics 2010 Conference, Kobe, Japan. Poster Presentation.

Application screenshots

Ontology tree (left) allows browsing for structures, select structures for reconstruction or load already reconstructed models. **Structure selection tab** (right) displays detailed information about currently reconstructed structure as well as provides reconstruction properties.

Model customization tab: Reconstructed structures may be previewed before exporting. Furthermore, additional model modifications (smoothing, mesh complexity reduction, etc.) may be applied.
