

3d Brain Atlas Reconstructor Installation (Ubuntu)

Note: This procedure is valid for *Ubuntu 9.04*, *Ubuntu 10.04 LTS*, *Ubuntu 10.10* and *Ubuntu 11.04*. Installation on other Ubuntu versions or other Linux distributions is similar but the packages versions may be slightly different.

1. [Installing required packages](#)
2. [Getting the code](#)
3. [Initial build](#)
 1. [Documentation](#)
 2. [CAF datasets](#)
 1. [sba_DB08](#)
 2. [sba_PHT00](#)
 3. [sba_WHS09](#)
 4. [sba_WHS10](#)
 5. [sba_RM on F99](#)
 6. [sba_LPBA40 on SRI24](#)
 7. [whs_0.5](#)
 8. [whs_0.51](#)

Installing required packages

Installation in Ubuntu 9.10

1. Install the Visualization Toolkit and other graphics libraries:

```
sudo apt-get install \  
libvtk5.2 libvtk5-dev libvtk5.2-qt4 libvtk5-qt4-dev \  
tk8.5 tk8.5-dev \  
python-vtk libgtkgl2.0-1 libgtkgl2.0-dev libgtkglext1 librsvg2-2 python-nifti
```

2. Install python related packages:

```
sudo apt-get install \  
python-gtkglext1 python-rsvg python-opengl python-numpy python-scipy python-wxgtk2.6
```

3. Other packages:

```
sudo apt-get install \  
potrace pstoeedit python-setuptools python-epydoc
```

If you are a developer you may also want to install optional packages with documentation:

```
sudo apt-get install vtkdata vtk-doc vtk-examples
```

Installation in Ubuntu 10.04

Install the following packages:

```
sudo apt-get install \  

```

```

libvtk5.2 libvtk5-dev libvtk5.2-qt4 libvtk5-qt4-dev \
tk8.5 tk8.5-dev \
python-vtk libgkgl2.0-1 libgkgl2.0-dev libgkglext1 librsvg2-2 python-nifti

sudo apt-get install \
python-gtkglext1 python-rsvg python-opengl python-numpy python-scipy python-wxgtk2.6

sudo apt-get install \
potrace pstoeedit python-setuptools python-epydoc

```

Installation in Ubuntu 10.10 and Ubuntu 11.04

Install the following packages:

```

sudo apt-get install \
libvtk5.4 libvtk5-dev libvtk5.4-qt4 libvtk5-qt4-dev \
tk8.5 tk8.5-dev \
python-vtk libgkgl2.0-1 libgkgl2.0-dev libgkglext1 librsvg2-2 python-nifti

sudo apt-get install \
python-gtkglext1 python-rsvg python-opengl python-numpy python-scipy python-wxgtk2.8

sudo apt-get install \
potrace pstoeedit python-setuptools python-epydoc

```

Once all the packages are installed it is time to create the directory structure.

Getting the code

It is assumed that the main directory dedicated for 3dBAR is `/home/$USERNAME/3dbar`. if you want to install it in another directory, replace `3dbar` with the desired path.

To get the latest stable version of 3dBAR fill out [the following form](#) then download 3dBAR using the link provided via email.

Unzip the file to your home directory and go to the 3dBAR directory:

```
mkdir ~/3dbar; unzip 3dbar_latest.zip -d ~/3dbar ; cd ~/3dbar;
```

Created directories have the following purposes:

- **bin**: Holds all executable files, atlas parsers and auxiliary scripts
- **lib**: Holds the 3dBAR api
- **atlases**: Directory, where the source data, *CAF datasets* and reconstructed models are stored. Each dataset (denoted as `DATASET_NAME`) contains the following subdirectories:
 - ◆ `atlases/DATASET_NAME/src` : Here the source data is located. It can be placed manually by a user or downloaded from internet depending on a particular parser.
 - ◆ `atlases/DATASET_NAME/caf` : This is the directory where a CAF dataset is generated by specific parsers.
 - ◆ `atlases/DATASET_NAME/reconstructions` : The directory for reconstructed models.

Initial build

Documentation

In order to generate documentation execute:

```
make doc
```

The documentation for API can be viewed by opening '~/3dbar/doc/api/html/index.html' and the documentation for 3dBAR graphic interface can be viewed by opening '~/3dbar/doc/api/html/index.html'.

CAF datasets

sba_DB08

In order to generate CAF dataset sba_DB08 execute:

```
source setbarenv.hs  
make sba_DB08
```

Generated dataset can be found in '~/3dbar/atlasses/sba_DB08/caf/' directory.

sba_PHT00

In order to generate CAF dataset sba_PHT00 execute:

```
source setbarenv.hs  
make sba_PHT00
```

Generated dataset can be found in '~/3dbar/atlasses/sba_PHT00/caf/' directory.

sba_WHS09

In order to generate CAF dataset sba_WHS09 execute:

```
source setbarenv.hs  
make sba_WHS09
```

Generated dataset can be found in '~/3dbar/atlasses/sba_WHS09/caf/' directory.

sba_WHS10

In order to generate CAF dataset sba_WHS10 execute:

```
source setbarenv.hs  
make sba_WHS10
```

Generated dataset can be found in '~/3dbar/atlasses/sba_WHS10/caf/' directory.

sba_RM_on_F99

In order to generate CAF dataset sba_RM_on_F99 execute:

```
source setbarenv.hs  
make sba_RM_on_F99
```

Generated dataset can be found in '~/3dbar/atlasses/sba_RM_on_F99/caf/' directory.

sba_LPBA40_on_SRI24

In order to generate CAF dataset sba_LPBA40_on_SRI24 execute:

```
source setbarenv.hs  
make sba_LPBA40_on_SRI24
```

Generated dataset can be found in '~/3dbar/atlasses/sba_LPBA40_on_SRI24/caf/' directory.

whs_0.5

In order to generate CAF dataset whs_0.5 execute:

```
source setbarenv.hs  
make whs_0.5
```

Generated dataset can be found in '~/3dbar/atlasses/whs_0.5/caf/' directory.

whs_0.51

In order to generate CAF dataset whs_0.51 execute:

```
source setbarenv.hs  
make whs_0.51
```

Generated dataset can be found in '~/3dbar/atlasses/whs_0.51/caf/' directory.
