Once all packages are installed, it's time to create directory structure:

Getting code

It is assumed that main directory dedicated for software is `/home/$USERNAME/3dbar`. if You want to install to another directory, please replace `3dbar` with desired path.

In order to get latest stable version use following command:

```
svn checkout http://3dbrainatlasreconstructor.googlecode.com/svn/tags/latest/
```

or get working code snapshot:

```
svn checkout http://3dbrainatlasreconstructor.googlecode.com/svn/trunk/ /home/$USERNAME/3dbar
```

then create directory where datasets will be stored:

```
mkdir -p /home/$USERNAME/3dbar/atlases
```

Created directories have following purposes:

- *bin*: Holds all executable files, atlas parsers and auxiliary scripts
- *lib*: Holds 3dBAR api
- *atlases*: Directory, where source data, *CAF datasets* and reconstructed models are stored. Each dataset (denoted as DATASET_NAME) contains following subdirectories:
    - atlases/DATASET_NAME/src : Here source data is located. It may be put manually by user or ie. downloaded from internet depending on particular parser.
    - atlases/DATASET_NAME/caf : Is the directory where CAF dataset is generated by particular parsers.
    - atlases/DATASET_NAME/reconstructions : Here performed reconstruction are generated using 3dBAR GUI.
